ABOUT US

TURK TECH SUPPLIES is the official business development partner of leading companies in Turkey whose commercial activities vary from supplying military and police accessories, defense and security systems, ICT products.

As **Turk Tech Supplies**, we pride ourselves in the success and excellence we have achieved in all our ventures as we continue our organic growth to becoming a conglomerate Company. We believe success stems from our business philosophy that great things are achieved through great partnerships, cooperation, mutual respect and harmony. Our organization has made a name for itself by earning the respect of its trusted partners.

Turk Tech Supplies thrives on principles that provides the ultimate goods and services and understands the importance of reliability , quality and honesty that are favorable for both public institutions and the private sector.

YDS TECHNOLOGY

DUAL DENSITY RUBBER SOLING TECHNOLOGY

DDR is a unique rubber soling formula designed for the toughest working environments, and ensuring a lightweight and comfortable wear experience all day long and beyond.

- Tough nitrile rubber outsole with SRC slip resistance rating
- Air injected into the rubber creates a lightweight cushioned midsole for maximum comfort and superior shock absorption
- Highly durable formula outlasting PU alternatives
- Heat resistant sole to 300°C
- Injected to the uppers, unlike most soles, ensuring the best bond possible
- Minimizes the effects of hot and cold surfaces to the wearer's feet hence keeping them warm during winter and cool during summer.

GORE-TEX® FOOTWEAR TECHNOLOGY

GORE-TEX® Footwear is ideal for a wide range of activities. These products are engineered to keep feet dry and protect them by being durably waterproof, breathable and providing optimized climate comfort.

- Long-lasting quality that is industry proven
- Versatile footwear lowering procurement cost for employer
- Reduces job-related accidents, injuries and illnesses
- Adaptable for multi-climate conditions
- Perspiration is pulled away from the feet, keeping them dryer from the inside
- Quick-drying fabric keeps feet warm and more comfortable

For further details please revert to GORE-TEX® Footwear Technology Section.

GORE-TEX, GTX, Gore and designs are trademarks of W. L. Gore & Associates. ©2011 W. L. Gore & Associates GmbH

L-PROTECTION TECHNOLOGY

L-Protection composite textile insoles are designed to provide increased safety and comfort as a new generation nail-proof textile insole.

- Resists penetration even by small diameter nails
- Greater protected surface area of the foot (than steel midsoles)
- Zero traceability by metal detector
- Maximum flexibility and comfort and greater foot sensitivity and comfort
- Greater ground adherence
- Minimum weight
- Thermo and electric isolation.

PU-RUBBER SOLING TECHNOLOGY

Combines the lightweight, shock absorbing properties of PU with a durable, heat resistant, high-grip rubber outsole. This sole offers flexibility and an athletic feel and is suitable for most industrial work areas.

SOLAR SHIELD TECHNOLOGY

Leather is specially treated to help keep the foot cool despite the effects of strong direct sunlight.

The treatment reinforces the leather's natural properties by reflecting sunlight away from the boot as well as helping the leather retain its colour properties.

SLIP RESISTANCE - C RATING

An advanced European slip resistance test to standard EN ISO 13287:2007. The sole unit is tested for slip resistance on ceramic tile wetted with dilute soap solution and on smooth steel with glycerol.

Marking symbols and specifications			
Marking	Footwear slip resistant on	Minimum Coefficient of Friction by EN ISO 13287:2007	
		Forward heel slip	Forward flat slip
SRC	Ceramic tile with SLS* and Steel with Glycerol	0.28 0.13	0.32 0.18

*water with 0.5% sodium lauryl sulphate

YDS SYSTEMS

POLYCARBONATE SHOCK ABSORPTION ANKLE PROTECTION SYSTEM

A protective polycarbonate disk backed with special foaming, designed to protect the outer ankle area by absorbing the impact.

FLEX-Z SYSTEM

Flexible areas specifically positioned in the front and/or rear of the boot for optimal flexibility and ease of movement.

NIP LINE CUT RESISTANCE SYSTEM

The leather at the nip line above the sole unit is reinforced with a specialist cut resistant strip running 35mm above the nip line to protect from punctures and lacerations.

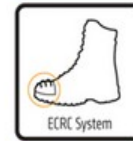

MUD GUARD SYSTEM

An additional layer of material protects the uppers from the effects of mud and dirt to ensure good durability.

QUICK RELEASE SYSTEM

A YKK zipper attached to the lacing system assures secure fixing during wear and helps to aid rapid donning and removal when required.

EXTREME CONDITION RIGID CAP SYSTEM

A distinctive ridged cap to reinforce the toe cap area and enhance the durability of the footwear.

LOCK AND GRIP LACING SYSTEM

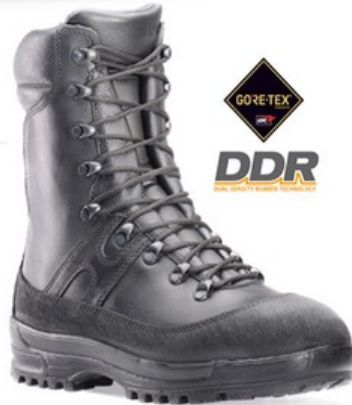

LG Lacing System not only provides better flexing of the sides of the boots for better support to feet and ankle but also allows for easy fastening and pressure distribution

MILITARY BALLISTIC GOGGLE SYSTEM

When it comes to the security of military personnel, especially for special forces and law enforcement personnel, protection is the most important issue. Because of that, Goliath Optical System products provide best protection from ballistic and environmental threats. Our goggles meet EN 166 EN 166:2001 Personal Eye Protection, ANSI Z87.1 High Velocity and Mass impact and Optical requirements and MIL-DTL-43511D Cl. 3.5.10 Ballistic Resistance.

The ballistic resistance of our lenses pass a Vo test (which means no penetration) using a 0.22 caliber, 17.0 grain (1,10 g), T37 shaped projectile at a velocity of 550 to 560 ft/s (167 to 170 m/s). On the other hand, High Performance Dipcoat Coating Technology of our goggles provides an anti-fog and anti-scratch resistance in even the harshest conditions. Also, our goggles have %100 UV,A,B,C protection and flawless optic.

High Performance Dipcoat Coating
Protects against fogging and scratching

• **Effective Air Vents**

Maximize Air Flow. Filtration Media Prevents Small Particle Entry

• **Uv Protection**

Provides 100% UV A,B,C Protection

• **Adjustable Strap**

Fits comfortable over helmet or directly on head

• **High-Impact**

Convertible Lenses

• **Wide Angle of View**

Enhances war fighting capabilities

• **Flawless Optics**

For enhanced performance

Goliath Optical System products have three main different production departments which are Plastic Injection, Lens Coating and Textile Unit. In addition to this, we're testing our goggles according to Europe, United States and United States Army Optical, Mechanical and Ballistic Standards in Quality Control Laboratory.

LIFE TENTS

- High strength, waterproof, PVC-coated polyester on the roof, groundsheet and outskirts.
- Breathable, waterproof, mildew-proof, flame retardant cotton material on the side walls and doors
- Breathable, heat-insulated, non-flammable, made of polyester fleece innerliner.
- Thanks to the lightweight aluminium profile, durable (heavy-duty) skeletal system against wind and snow loads
- Custom design connectors made of high-strength engineering plastics
- Practical installation. (15 minutes with 4 people)
- Loading up to 20 tents in a pallet, practical transport.
- Easy transport and loading due to lightweight material usage.
- Divisible interior design to create different and comfortable living areas.
- Non-flammable chimney pot for heating in the winter

YDS BUNK Double Bunk Bed

YDS bunk is light weight, easily portable, has a foldable design and minimum flooring feature. It can be used as a double bunk to maximize the space.

YDS CAMPBED Single Camping Cot

CERTIFICATES

CE Mark

YDS Safety Footwear has been tested by SATRA Technology centre to the Directive for Personal Protective Equipment (PPE) Directive No.89/686/EEC and carries the CE mark accordingly.

EN ISO 9001:2015

YDS operates a Quality Assurance System in accordance with EN ISO 9001:2015. This provides the customer with further proof that the product is regularly monitored through a quality system and ongoing audit testing.

Guarantee of Quality

All our Safety footwear is manufactured to EN specifications as indicated and fully complies with the appropriate standard and the statutory requirements where applicable. However, we do reserve the right to amend design and material specifications, where necessary.

By testing all raw materials in-house, in its SATRA accredited laboratory, Yakupoglu can test the performance and compatibility prior to usage in production line. Semi-finished and finished products specifications and EN norms. These tests allow Yakupoglu to benchmark against other products in the market and act as a performance indicator for continuous improvement to its products while easing the process of regulatory conformity. are randomly picked and tested in accordance with the minimum in-house specifications along with customer

OHSAS 18001

By having OHSAS 18001 certificate, YDS proves that its management system has been measured against a best practice standard and found compliant. Issued by a third party accreditation body/registrars, the certificate lets employees and other stakeholders know that YDS proactively protects the health and safety of its work environment.

DEFENCE SYSTEMS

Radar Systems

Meteksan Defence design and develop advanced and unique military radar systems to its customers based on Radio Frequency (RF) technology. The abilities Meteksan Defence has gained in millimeter wave radar technology since the foundation of the company, has made them to manufacture high-performing, high-reliability radar systems specialized in early warning, situational awareness and defense. With the knowledge and experience gained in RF microwave and millimeter wave technologies, Meteksan Defence develops and produces fire control radar system for helicopters, automatic landing and take-off radar for UAVs and radar altimeters for missile platforms.

Perimeter Surveillance Systems

Perimeter Surveillance Systems developed by Meteksan Defence, includes ground surveillance radar, drone detection radar and counter drone systems for border security and critical infrastructure security such as airports, military bases, energy facilities. These high resolution advanced technology perimeter surveillance systems are optimized for human and drone detection and recognition automatically, which eliminate the need for continuous scanning by security personnel.

Laser and Electro-Optic Systems

In the field of laser and electro-optical technologies, as Meteksan Defence, we are focused on developing high beam quality fiber laser sources, high power laser transmitter solutions and advanced laser / electro-optical sensing techniques. We are developing high performance fiber laser sources and sensing techniques for various LIDAR (Light Detection and Ranging) and directional laser systems, with a successful University – Industry collaboration model with Bilkent University Ultra Fast Optics Laboratory (UFOLAB).

DEFENCE SYSTEMS

Communication Systems

Meteksan Defence develops high technology military communication systems such as missile and tactical data links, UAV communication, GNSS systems with electronic warfare protection, fully compliant with platform and operational requirements and having small size, weight and power consumption (SWAP). The company is highly experienced in transfer and share of data such as target, status, position, intelligence, time to strike and strike verification (C4ISR) between related platforms and users.

Platform Simulators

Meteksan Defence develops training simulators for damage control, fire fighting and helicopter escape trainings of navy and also other electromechanical simulator solutions for Armed Forces. Military training simulators developed include advanced technology provided from simulation and mechatronic market, and command control centers for monitoring, controlling and evaluating all the trainings. Capabilities include embedded systems, hydraulic and mechanical system designs, 3-dimensional modeling, control systems, active-passive simulations, reverse engineering for an existing platforms simulation and control systems for training simulators.

Underwater Acoustic Systems

Meteksan Defence is developing Underwater Acoustic Systems with 'Center of Excellence' approach since 2009 to add value for naval platforms. Meteksan Defence became an important contractor at system level after investing in this area, targeting to be the underwater acoustic systems company of Turkey. Main products of the company are; hull mounted anti-submarine (ASW) sonar, transducer, hydrophone, fiber optic acoustic sensor, underwater digital acoustic modem, flank array sonar, acoustic vector sensor and submarine intercept passive sonar.

DEFENCE SYSTEMS

RETINAR OPUS PERIMETER SURVEILLANCE SYSTEM

Radar and Camera Surveillance Suite

MULTIFUNCTIONAL ZONE SECURITY WITH RETINAR OPUS

Retinar OPUS Ground Surveillance System is a multifunctional surveillance system which is the deep integration of Meteksan's innovative perimeter surveillance radar Retinar PTR-X and advanced day/thermal cameras. Retinar OPUS is a system which has radar and long range day/thermal camera placed on a mast, fixed to a stationary pole or on a vehicle. The camera system can be cued to radar tracks and it provides visual information about the targets detected by Retinar PTR-X radar (slew-to-cue), enhancing target recognition and identification. Optionally, Retinar OPUS can be integrated with Retinar FAR-AD Drone Detection Radar to enable both ground security and low altitude drone security.

ADVANCED RADAR AND CAMERA ALGORITHMS WITH USER FRIENDLY INTERFACE

Retinar OPUS Perimeter Surveillance System's user interface is designed to provide easy and effective usage to the operator. It's user interface was designed to minimize training requirement for the operator and enable any security personnel to efficiently use the system with minimum training. In the user interface of Retinar OPUS, radar and camera work in harmony to achieve target recognition at unrivaled ranges. The digital raster image and 3D maps significantly increases the users' perception of surrounding activity and situational awareness. Retinar OPUS's working status can be monitored via advanced Build In Test (BIT) and the system is always under control of user via user interface. There is a record and replay features for radar and camera on user interface to analyze previous situations.

RETINAR OPUS USAGE AREAS

- ✓ Critical Infrastructure Protection
- ✓ Airport Security
- ✓ Airbase Protection
- ✓ Harbor Protection
- ✓ Seaport Security
- ✓ Energy Infrastructure (power plants, pipelines, refineries, etc.) Security
- ✓ Transportation Infrastructure
- ✓ Force Protection
- ✓ Perimeter Security
- ✓ Border Protection

DEFENCE SYSTEMS

ANTI DRONE SYSTEM

Perimeter Security Against Drone

Anti-Drone Systems offer superior drone detection and tracking performance with Retinar Radar System. Radar thermal/day cameras and allows destroying the drones with an RF jammer and optional laser system. Retinar FAR-AD and KAPAN are especially developed to detect Mini/Micro UAV threats. It is a new generation radar system with advanced drone detection, classification and tracking technologies.

DRONE THREATS ARE INCREASING RAPIDLY

The use of drones for intelligence or assault by enemies or terrorists are spreading rapidly and it is very difficult to detect them by traditional security measures. A small drone can harass a target or even drop an explosive payload that can make catastrophic damages on critical facilities or military bases. Therefore, complete and reliable protection solution is a necessity against drone threats. With considering main requirements, Meteksan Defence developed KAPAN Anti-Drone System for military and security officers to help them fight with drone threats. KAPAN offers a superior drone detection, tracking and neutralization performance for border and critical infrastructure security with high technology drone detection radar, electro-optic and jammer systems.

ARMED UNMANNED SURFACE VEHICLE (AUSV)

ULAQ is the first indigenous armed unmanned surface vessel (AUSV) developed in Turkey.

The unmanned surface vessel has different versions to support a range of missions such as reconnaissance, surveillance and intelligence, asymmetric warfare, anti-surface warfare (ASuW), anti-submarine warfare (ASW), strategic facility security, and armed escort and force protection.

The combat vessel can conduct joint operations with complementary forces such as unmanned aerial vehicles (UAVs), armed UAVs, and tactical UAVs.

DEFENCE SYSTEMS

ARMED UNMANNED SURFACE VEHICLE (AUSV)

ULAQ

AUSV

OPERATIONAL CAPABILITIES

ULAQ AUSV can be operated in remote and autonomous modes according to mission and field conditions. Utilizing its autonomous algorithms and artificial intelligence infrastructure, ULAQ AUSV can navigate safely, avoid from ships/floating platforms as per the COLREGs, regain lost communication and return to the base. Safe operational capability is ensured by encrypted communication infrastructure that prevents the system to be hacked.

Autonomous algorithms also provide joint operation capability with other AUSVs, USVs and UAVs. AUSV can be launched from shore or floating platforms such as logistic support ships, aircraft carriers, frigates, and corvettes to engage with ISR, surface/subsurface warfare, electronic warfare, aerial defense or act as an asymmetric threat.

ULAQ AUSV can be integrated with various Combat Management Systems. The vehicle has escape and zeroize functions to avoid being captured by the enemy.

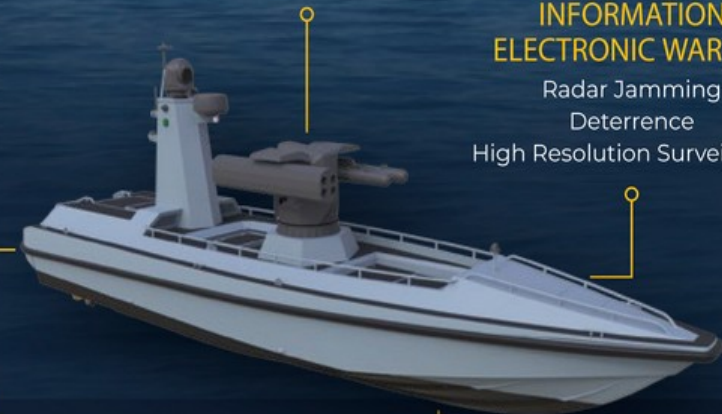

AERIAL WARFARE

- Deception
- Joint Operation (USVs, UAVs)
- Radar Jamming

INFORMATION/ ELECTRONIC WARFARE

- Radar Jamming
- Deterrence
- High Resolution Surveillance

ASYMMETRIC THREAT

- Infrastructure Protection
- Tracking and Surveillance
- Sacrificial Boat

SURFACE WARFARE

- High Resolution Surveillance
- Guided Missiles
- Radar Jamming

SECURITY SYSTEMS

UNMANNED AIR VEHICLES (UAV)

Our unmanned aerial vehicles have long flight time efficiently performs the tasks given such as;

- Discovery and surveillance
- Patrol
- Agricultural spraying,
- Cargo delivery

Map production according to your usage with;

- Thermal
- Zoom
- NIR and Map Camera options

SECURITY SYSTEMS

Military Purposes;

- Tactical level (Team, Company / Battalion and Regiment) military units, reconnaissance, surveillance, target detection and tracking tasks,
- Close security, point and narrow zone reconnaissance missions at military and police stations, border stations,
- Manual or autonomous patrol duties along the border line in border units,
- Destruction of handmade explosives, without risking personnel,
- In the Coast Guard and the Navy; close safety and search and rescue missions, airborne life vest and audible alerts, night search and rescue activities,
- Duty to interfere in suspicious situations grenades, explosive or rocket dropping missions in airborne

Civil and Engineering Purposes;

- Monitoring, control and measurement of point and narrow zone mining sites,
- Determination and measurement of irrigated agricultural areas,
- Detection of diseased plants and marking diseased areas on the map,
- Airborne spraying of identified diseased agricultural areas,
- Airborne control and damage detection of disaster areas,
- Monitoring, control and security of oil pipelines,
- Ensuring close safety of civil critical areas such as factories, petrochemical plants, granaries, rivers and reservoirs,
- Detection and monitoring of migrant smuggling and trafficking.
- Search and rescue missions,
- Determination of environmental pollution

SECURITY SYSTEMS

FIBER OPTIC BASED ACOUSTIC SENSING SYSTEM

SECURITY SYSTEMS

FIBER OPTIC BASED ACOUSTIC SENSING SYSTEM

FUNCTIONAL FEATURES

- The fiber optic line can be monitored live using GIS based Human Machine Interface.
- Types and regions of threats can be defined along the fiber.
- Past threats can be accessed and analyzed.
- Access can be granted to multiple users.

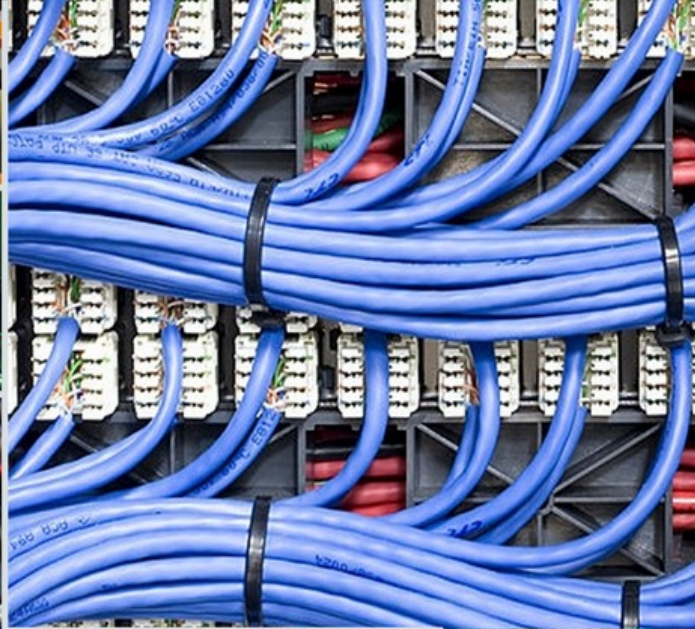

FOTAS APPLICATION AREAS

- Industrial, Residential and Commercial Sites Security
- Oil, Natural Gas and Water Pipelines
- Military, Public and Private Facilities Security
- Airports, Railways and Highways Security
- Power Plants Security
- Border Security
- Security of Mining Enterprises

GENERAL FEATURES

- Access to FOTAS with multiple devices via web interface Fast and reliable with 24/7 access
- Up to 10 km or 50 km options of real-time security with one device
- Up to 10 m sensitivity range
- Ease of use and installation
- No electronic devices needed along the protected area.
- With CCTV integration,
- Threat zones can be visually monitored.
- Durability and reliability in demanding environments
- Long lifetime

ICT PRODUCTS AND SOLUTIONS

- Data Center Cabling Structures
- Data Center Solutions
- Fiber Optic Enclosures
- Fiber Optic Cables
- Fiber Optic Assemblies
- Fiber Management Shelves

FIREFIGHTING VEHICLES

- ARFF VEHICLES
- AERIAL VEHICLES
- URBAN TYPE VEHICLES
- INDUSTRIAL VEHICLES
- RURAL & OFF-ROAD VEHICLES
- FIRE SUITS
